

Supply and Use Tables: 2017

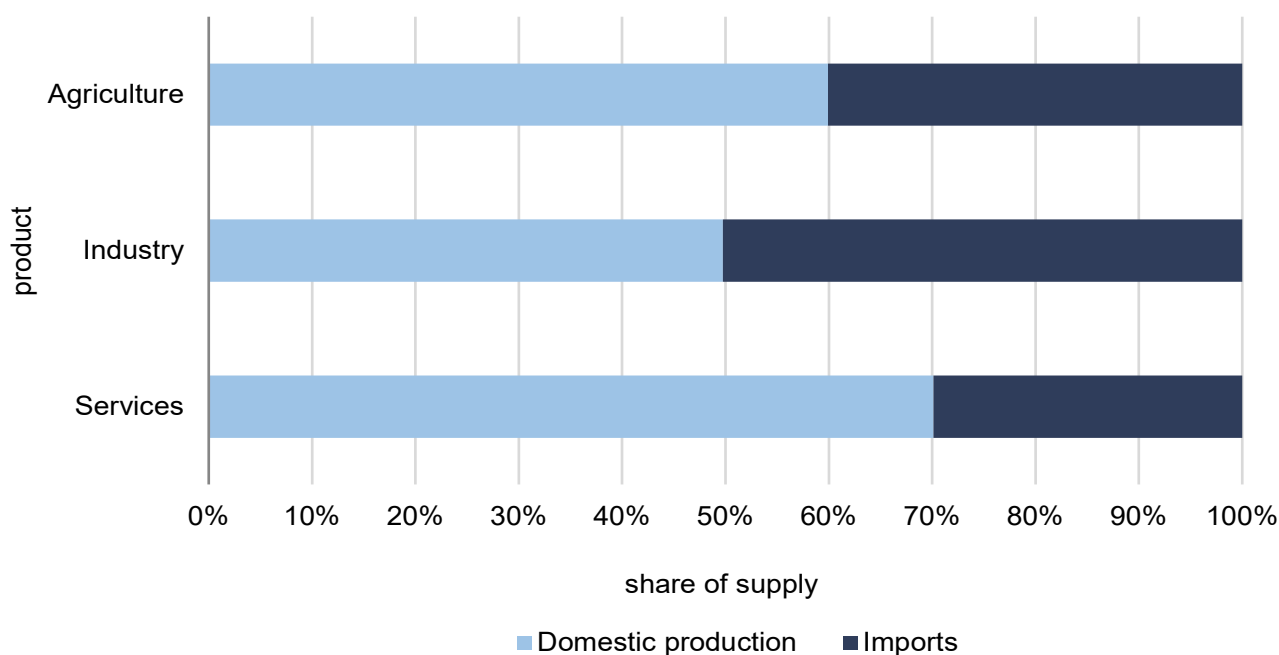

Supply and use tables provide a detailed picture of the supply of goods and services by domestic production and imports and the use of goods and services for intermediate consumption and final use (consumption, gross capital formation, exports). They are compiled for 216 products and 95 industries.

For publication purposes, a high level of aggregation was chosen due to confidentiality obligations. The tables are presented at NACE section level in which industries and products are grouped in 19 categories (Annexes 1 and 2). For research purposes, the tables can be further disaggregated and grouped in 44 categories.

The supply table (Table 1) shows the source of the total value of the supply of goods and services at purchasers' prices, by product, in the Maltese economy. In 2017, the share of domestic production in total supply at purchasers' prices stood at 63.7 per cent. The share of imports was 33.7 per cent, while the share of net taxes (taxes less subsidies on products) stood at 2.6 per cent.

Chart 1 provides further detail on the shares of domestic production and imports in total supply at basic prices by product.

Chart 1. Total supply at basic prices by product

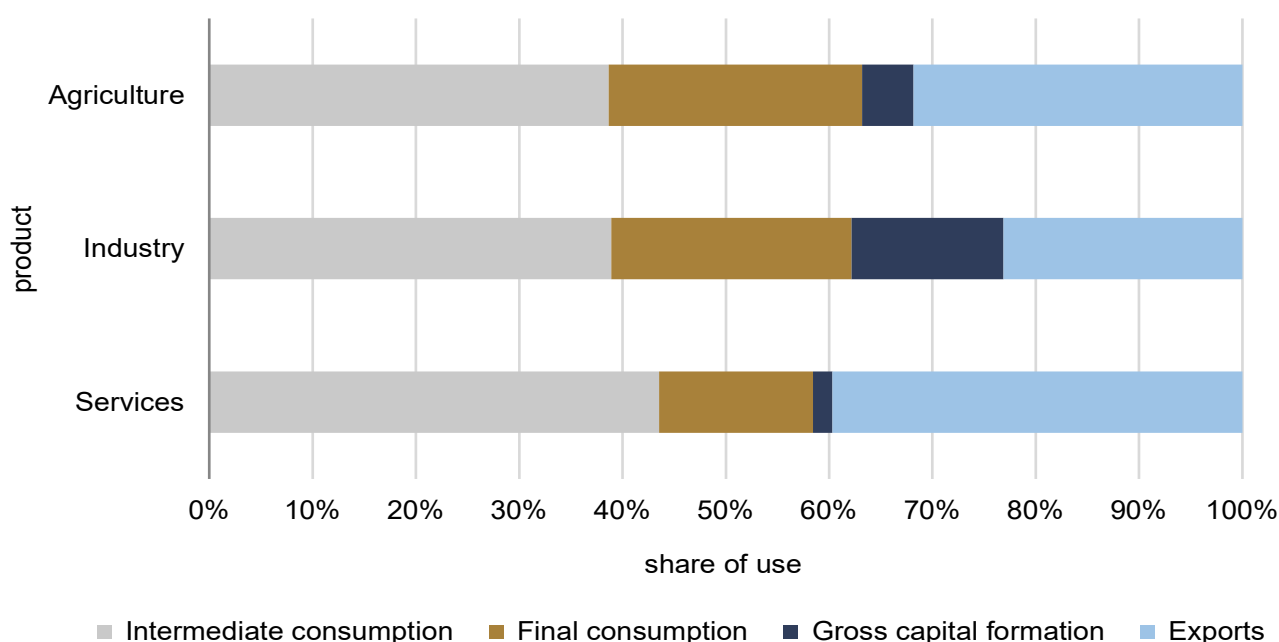

The use table at purchasers' prices (Table 2) shows how the supply of each product was used in the economy across the major types of use identified in national accounting. These use categories are intermediate consumption, final consumption of households, non-profit institutions serving households and general government, gross capital formation and exports.

Chart 2 shows the composition of each type of use by type of product at purchasers' prices. The supply of agricultural products (products A) is mostly used as intermediate consumption of locally produced goods and services (38.6 per cent), with the next most important uses being exports (31.9 per cent) and final consumption (24.6 per cent). The use of these products in gross capital formation is limited (4.9 per cent).

The main use of the supply of industrial products (products B to F) is also intermediate consumption (38.9 per cent), with the rest spread between final consumption (23.3 per cent), exports (23.1 per cent) and gross capital formation (14.7 per cent).

Again, the supply of services (products G to U) is mostly used as intermediate consumption (43.5 per cent), closely followed by exports (39.7 per cent). The next most important use of these products is final consumption (14.9 per cent), while gross capital formation plays a limited role (1.9 per cent).

Chart 2. Total use at purchasers' prices by product

Supply and use tables are also available at previous year's prices. Data is presented at an aggregated level in Table 3 (supply table at purchasers' prices) and Table 4 (use table at purchasers' prices).

Compiling prices and volumes within an accounting framework of supply and use tables makes it possible to derive economic growth in volume terms and inflation at the sectoral level of the total economy. In addition, price changes and volume growth can be derived for products and industries, and final demand categories. This offers the opportunity to perform detailed analysis, such as that relating to productivity.

Methodological notes

1. The Supply and Use Tables (SUT) relate to the reference year of 2017. They are consistent with the main aggregates published in news release 218/2022.
2. The SUT are in line with the European System of Accounts (ESA) 2010 Manual (ISBN 978-92-79-31242-7). This system of accounts is mandatory for all EU Member States. The accounts are subject to audit by the European Court of Auditors and Eurostat's GNI Committee to ensure reliability, comparability and exhaustiveness. The SUT for Malta are entirely consistent with the requirements for both current prices and previous year's prices outlined in the ESA of 2010. The compilation and balancing procedures implemented to produce these tables follow those recommended by the Eurostat Manual of Supply, Use and Input-Output Tables, 2008 edition.

The ESA 2010 Transmission Programme requires Member States to compile SUT annually and input-output tables every five years. In Malta, SUT have been calculated for 2000, 2001, 2004, 2008, 2010, 2011, and 2013 to 2017 while input-output tables have been calculated for 2010 and 2015. The SUT of 2000, 2001 and 2004 are in a different classification to those compiled for 2008 onwards, and thus are not directly comparable.

3. SUT are compiled at a detailed level of 216 products and 95 industries. Industries are classified using the NACE Rev. 2 classification whereas the CPA 2008 classification is used for products. For dissemination purposes, the SUT tables are grouped at NACE and CPA section level of 19 categories.

Users can access data with a level of aggregation of 64 industries and 64 products from Eurostat's database: <https://ec.europa.eu/eurostat/data/database> or request further details from the National Statistics Office (NSO).

4. In order to compile SUT, the NSO makes use of various sources, mainly business surveys conducted by the NSO and other administrative sources. The NSO compiles SUT both at current and previous year's prices.
5. Data for 2017 should be considered as final.
6. The ESA 2010 GNI Inventory provides a detailed explanation of sources and methods used for estimating GNI in Malta. It is the basis for Eurostat's assessment of the quality and exhaustiveness of GNI data and their compliance with ESA 2010 in the context of the GNI for own resources purposes. The inventory is a reference document that is updated to reflect the latest methodology in place. Reference to the compilation of SUT is available in Chapter 6. The inventory is available on the NSO website:

https://nso.gov.mt/en/nso/Sources_and_Methods/Unit_A1/National_Accounts/Documents/GNI_Inventory.pdf

Users should be informed that the GNI Inventory currently available on the NSO website describes the sources and methods of the ESA 2010 series as published in September 2014. The GNI Inventory is currently being updated with the methodological changes implemented in the benchmark revision of August 2020.
